

# A large-scale dataset on peer review in scientific journals

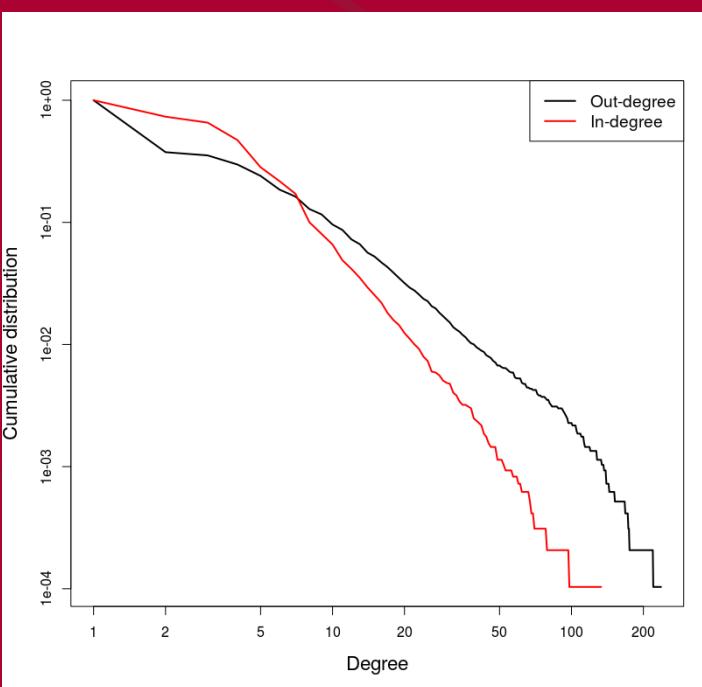

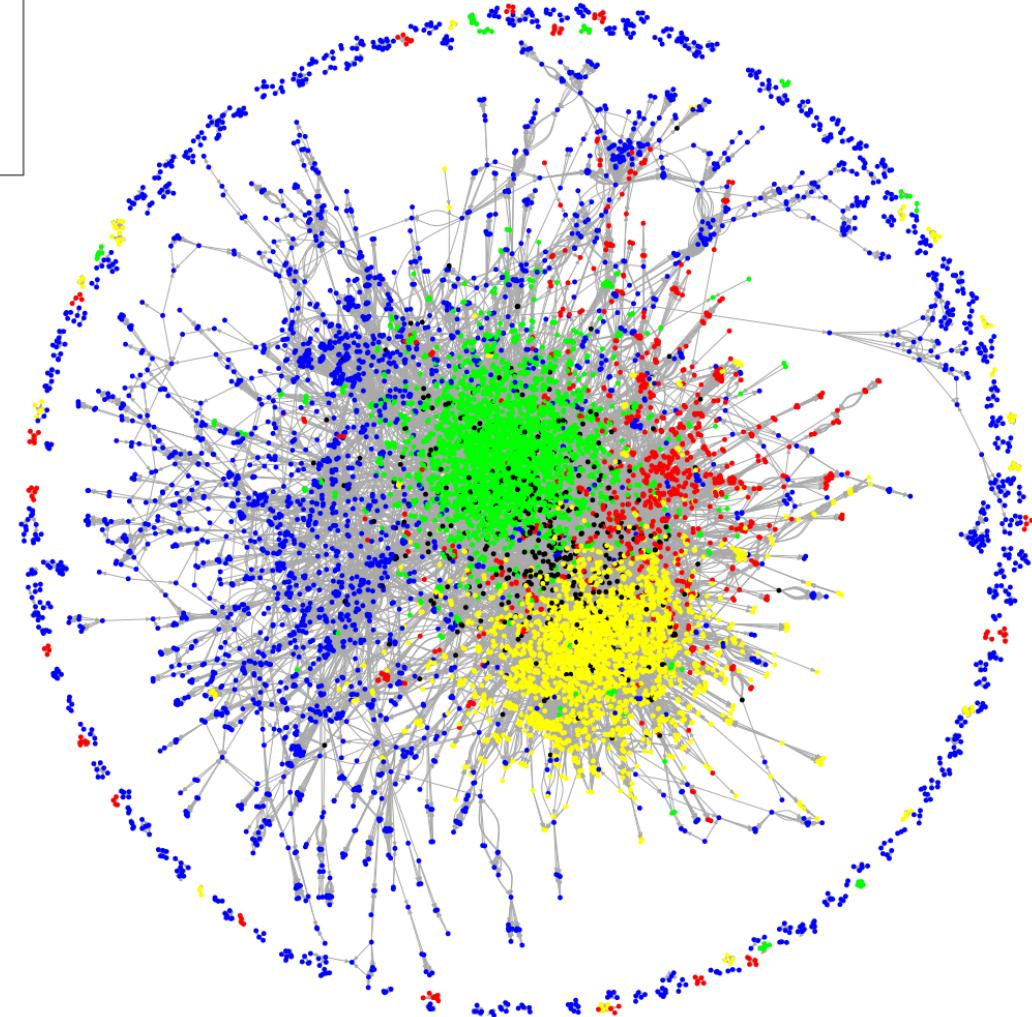

- COST Action TD1306 *New frontiers of peer review* (PEERE)
- Collaboration with major publishers (Elsevier, Springer, Wiley, ...) to share peer review process data.
- Dataset under construction: ~ 60 variables per journal
- Objective: 10 years of observations for 100 journals in the short term and up to 1000 in the longer one
- As each journal typically includes 3000-4000 records, we should end up with up to  $10^7$  data
- Preliminary test with 4 journals in the infometrics area: 14,870 observations and 58 variables
