In-House Series

The GESIS in-house series include various publications formats ranging from practice-oriented representation of survey research to books on major research activities:

- GESIS Scientific Series: in-house published books of research reports and contributions at conventions.
- GESIS Papers: The GESIS Papers contain contributions earmarked for publication in specialist journals, but also information on special data, methods and literature to support our users in their scientific work and in applying our products.

In addition, GESIS offers user conferences and research methods training events for all these phases.

Historical Social Research (HSR)
Historical Social Research is an international journal for the application of formal methods to history. It has been published since 1976. It covers quantitative and qualitative social research, historical sociology, social scientific history and digital humanities.

Methods, data, analyses (mda)
Methods, data, analyses (mda) publishes research on all questions important to quantitative methods, with a special emphasis on survey methodology. Mda is released in print and online as open-access journal. All content is freely available and can be distributed without any restrictions, ensuring the free flow of information that is crucial for scientific progress.

We especially invite authors to submit articles extending the profession’s knowledge on the science of surveys, be it on data collection, measurement, or data analysis and statistics. We also welcome applied papers that deal with the use of quantitative methods in practice, with teaching quantitative methods, or that present the use of a particular state-of-the-art method using an example for illustration.

Social Indicators Service (ISI)
The Social Indicators Information Service – ISI is considered as a contribution to regular social reporting. It is edited and published by the Department Monitoring Society and Social Change of GESIS. The Social Indicators Information Service aims to reach both an academic as well as an interested non-academic public with or without a background in the social sciences.

It is published twice a year and provides information – data and analytical views – on different issues of well-being as well as on selected aspects of general social change, also in comparative perspective. ISI is published predominantly in German. At the same time ISI seeks to contribute empirical data and analyses considered as an information input to significant topics of current socio-political discourses.
