

EU-Labour Force Survey
November 2013 release

Setup for Importing the Anonymised Quarterly Data Sets for 1983-2012

Content

- I. Overview
- II. Explanatory notes on the recoding of alphanumeric variables into numeric variables
- III. Explanatory notes on the recoding of missing values
- IV. Explanatory notes on specific recoding, renaming and label definitions
- V. Notes on irregularities not mentioned in the User Guide
- VI. Classifications

I. Overview

The following information will help you to import the EU-LFS 1983-2012 quarterly data. The data you received from Eurostat are formatted as comma separated values (csv). With the routines provided by GESIS's German Microdata Lab, these data can be converted into SPSS and Stata.

The routines to convert the data into SPSS consist of a year-specific setup and a universal label syntax:

Setup_EULFS_1998-2012_q.sps
Setup_EULFS_1983-1997_q.sps
Labels_EULFS_1983-2012.sps

The routines to convert the data into Stata consist of a year-specific setup and macro as well as a universal label Do-file:

Makro_EULFS_1998-2012_q.do
Makro_EULFS_1983-1997_q.do
Setup_EULFS_1998-2012_q.do
Setup_EULFS_1983-1997_q.do
Labels_EULFS_1983-2012.do

The routines achieve the following objectives:

- Transformation of EU-LFS quarterly data from csv into sav (SPSS) and into dta (Stata)
- Recoding of alphanumeric variables into numeric variables
- Recoding of missing values
- Definition of variable and value labels (by executing the label syntax)

For a first check of the converted data, you can compare the number of cases per country with the number of cases listed in table 1 to 30. Consistent numbers indicate that the execution of the setup was successful.

II. Explanatory notes on the recoding of alphanumeric variables into numeric variables

- HHNUM, QHHNUM

These variables have a large amount of values. Thus they remain alphanumeric.

- YEARESID

The alphanumerically coded 5-year groups (11-14, 15-19 etc.) are recoded into numeric codes in line with the standard aggregation of AGE. In Malta, the grouping differs slightly from the other countries (see User Guide 2013, p. 65), however this is documented in the appropriate value labels.

Until 2007, there is only one group for "more than 10 years".

- COUNTRYW

Numeric 2-digit codes are assigned for European countries. These codes display the alphabetical order of the country as given by the ISO codes (e.g. 06 for BG representing Bulgaria). The alphanumeric codes in the EU-LFS differ from the ISO codes with regard to the United Kingdom (UK instead of GB). In this case, the numeric code is assigned in accordance with the code used in the EU-LFS (i.e. 50 for UK).

Numeric 4-digit codes are assigned for countries outside Europe. The first two digits indicate the region, according to the country codification from 2012 (e.g. 05 for North Africa).¹ The last two digits display the alphabetical order of the country in the corresponding region as given by the ISO codes (e.g. 02 for EG representing Egypt, so that the whole code for Egypt is 0502).²

In Malta and Slovenia, the coding of COUNTRYW in the raw data differs from the other countries (see User Guide 2013, p. 65). Thus the recoding within the Setup is different as well.

- REGION, REGIONW

The values of these variables have country-specific meanings (according to the NUTS classification).³ That is why they are attached to the consequent country variables

¹http://epp.eurostat.ec.europa.eu/portal/page/portal/employment_unemployment_lfs/documents/Country_codification_from_2012_onwards.pdf

²http://www.iso.org/iso/country_codes/iso_3166_code_lists/country_names_and_code_elements.htm

³http://epp.eurostat.ec.europa.eu/statistics_explained/index.php/EU_labour_force_survey_-_methodology#LFS_coding_lists_and_explanatory_notes_over_time

(COUNTRY, COUNTRYW) in the first step, excluding region variables with the code "00", which stands for "no information delivered" (see User Guide 2013, p.15). The new codes consist of 4 to 5 digits. Digits 1 and 2 are similar to the codification of COUNTRY/W. Digits 3 and 4 are similar to the original codification of REGION/W, excluding those containing letters. Letters are coded according to the alphabet.

III. Explanatory notes on the recoding of missing values

Coding standard for missing values:

in SPSS	in Stata	Labels
-1	.a	"No answer"
-2	.b	"Not applicable"
-3	.c	"Not available"
-4	.d	"Not specified"
-5	.e	"No information delivered"
-9	.i	"Otherwise" in exceptional cases (only LEAVCLAS)

In SPSS these missing values are declared as user-missing values.

The Code -3/.c for "Not available" is assigned, if a variable has no valid cases in a country. Some of these variables have only system-missings (i.e. blanks) in the raw data of the respective country, others have only cases with "No answer" and/or "Not applicable".

Specifics and exceptions:

– NATIONAL, COUNTRYB

The code -1/.a includes not only cases without a valid answer, but also suppressed cases, cases with the original code "Other and Stateless", and in some countries certain other cases (see User Guide 2013, p. 69).

IV. Explanatory notes on specific recoding, renaming and label definitions

– IS883D, IS88PR3D

A number of cases belonging to the category "armed forces" had been coded incorrectly in the 3-digit ISCO code (code 11 instead of code 10, in some countries and years). This became obvious while crosstabulating the 1-digit with the 3-digit ISCO code. Thus these cases have been recoded.

V. Notes on irregularities not mentioned in the User Guide

Note that the weighting factor COEFF can be zero or missing in some cases. This is correct and guarantees appropriate weighting.

2012 data:

– INTWEEK, SIGNISAL

These variables contain system-missings in some countries. The origin of these missings is unclear.

2011 data:

– INTWEEK, SIGNISAL

These variables contain system-missings in some countries. The origin of these missings is unclear.

2010 data:

– HHSEQNUM, INTWEEK

These variables contain system-missings in some countries. The origin of these missings is unclear.

– YEARESID, AGERESID

There are only blanks in Iceland for persons who have not been born in Iceland. Thus there are only two categories (0 "Born in the country" and -1 "No answer").

– COURLEN

In Denmark, there is one case with the (obviously) invalid code 1000.

2009 data:

– HHSEQNUM, INTWEEK, INTWAVE, DEGURBA, NOWKREAS

These variables contain system-missings in some countries. The origin of these missings is unclear.

– DEGURBA

In Switzerland all cases have the value 2 for "Intermediate area".

– YEARESID, AGERESID

There are only blanks in Iceland for persons who have not been born in Iceland. Thus there are only two categories (0 "Born in the country" and -1/a "No answer").

2008 data:

– HHSEQNUM, INTWEEK, INTWAVE, DEGURBA, NOWKREAS

These variables contain system-missings in some countries. The origin of these missings is unclear.

– YEARESID, AGERESID

There are only blanks in Iceland for persons who have not been born in Iceland. Thus there are only two categories (0 "Born in the country" and -1/a "No answer").

2007 data:

- HHSEQNUM, INTWEEK, INTWAVE, DEGURBA

These variables contain system-missings in some countries. The origin of these missings is unclear.

2006 data:

- HHSEQNUM, INTWEEK, INTWAVE, DEGURBA

These variables contain system-missings in some countries. The origin of these missings is unclear.

2005 data:

- HHSEQNUM, INTWEEK, INTWAVE, DEGURBA, METHODDA – METHODDM

These variables contain system-missings in some countries. The origin of these missings is unclear.

- Data of Greece (gr2005q1)

There are seven cases with defective raw data. Due to a supernumerary comma for the variable COURLEN in the raw data, the values of all following variables are mismatched.

To exclude these cases from the analysis, they can be identified as follows:

QHHNUM=Q150382 and HHSEQNUM=3, QHHNUM=Q125714 and HHSEQNUM=1,
QHHNUM=Q153957 and HHSEQNUM=3, QHHNUM=Q153957 and HHSEQNUM=4,
QHHNUM=Q127458 and HHSEQNUM=4, QHHNUM=Q131157 and HHSEQNUM=1,
QHHNUM=Q156085 and HHSEQNUM=4.

2004 data:

- HHSEQNUM, INTWEEK, INTWAVE, DEGURBA, METHODDA – METHODDM

These variables contain system-missings in some countries. The origin of these missings is unclear.

- COURLEN

In Denmark, there is one case with the (obviously) invalid code 1000.

2003 data:

- HHSEQNUM, INTWEEK, INTWAVE, DEGURBA, METHODDA – METHODDM

These variables contain system-missings in some countries. The origin of these missings is unclear.

2002 data:

- HHSEQNUM, INTWEEK, INTWAVE, DEGURBA, METHODDA – METHODDM

These variables contain system-missings in some countries. The origin of these missings is unclear.

2001 data:

- HHSEQNUM, INTWEEK, INTWAVE, DEGURBA, METHODDA – METHODDM

These variables contain system-missings in some countries. The origin of these missings is unclear.

2000 data:

- HHSEQNUM, INTWEEK, INTWAVE, DEGURBA, WSTATOR, METHODDA – METHODM

These variables contain system-missings in some countries. The origin of these missings is unclear.

1999 data:

- HHSEQNUM, INTWEEK, INTWAVE, DEGURBA, METHODDA – METHODM

These variables contain system-missings in some countries. The origin of these missings is unclear.

- COURLEN

In Ireland, in the third quarter, all cases are coded with 9 (although the variable is not available until 2003).

- HATLEVEL

In Ireland, in the third quarter, there are only invalid one-digit codes. An unambiguous matching to the valid two-digit codes is not possible. Therefore the invalid codes remain (unlabelled). It seems likely that code 1 is equal to code 10, code 2 is equal to code 21 and code 6 is equal to code 60. Code 3 might be equal to either code 32, code 33 or code 35. Code 5 might be equal to code 51 or code 52. Code 9 should be equal to code -2.

- ILOSTAT

In Cyprus there are no cases with value 2 for "Unemployed" and no cases with value 3 for "Inactive". Instead, there are a lot of cases with system-missing. The origin of these missings is unclear.

1998 data:

- HHSEQNUM, INTWEEK, INTWAVE, DEGURBA, METHODDA – METHODM

These variables contain system-missings in some countries. The origin of these missings is unclear.

1997 data:

- DEGURBA

This variable contains system-missings in some countries. The origin of these missings is unclear.

- IS883D, IS88PR3D

There is a small number of cases with invalid codes (e.g. 249, 299 or 515) in some countries. The meaning of these codes is unclear. Thus they remain unlabelled.

- REM

In Spain and Portugal there are some cases with the invalid code 13. The meaning of this code is unclear. Thus it remains unlabelled.

1996 data:

- DEGURBA

This variable contains system-missings in some countries. The origin of these missings is unclear.

– IS88PR3D

There is a small number of cases with invalid codes (e.g. 299, 349 or 799) in some countries. The meaning of these codes is unclear. Thus they remain unlabelled.

– REM

In Spain and Portugal there are some cases with the invalid code 13. The meaning of this code is unclear. Thus it remains unlabelled.

– YEARPR, LEAVTIME

In Slovenia, there are a few cases with invalid codes (e.g. 193 for YEARPR or 21647 for LEAVTIME). The meaning of these codes is unclear. Thus they remain unlabelled.

1995 data:

– DEGURBA

This variable contains system-missings in some countries. The origin of these missings is unclear.

– IS88PR3D

There is a small number of cases with the invalid code 799 in Denmark. The meaning of this code is unclear. Thus it remains unlabelled.

1994 data:

– IS88PR3D

There is a small number of cases with invalid codes (e.g. 299 or 799) in some countries. The meaning of these codes is unclear. Thus they remain unlabelled.

1993 data:

– IS883D, IS88PR3D

There is a small number of cases with invalid codes (e.g. 219, 515 or 819) in some countries. The meaning of these codes is unclear. Thus they remain unlabelled.

1992 data:

– IS883D, IS88PR3D

There is a small number of cases with invalid codes (e.g. 515, 799 or 899) in some countries. The meaning of these codes is unclear. Thus they remain unlabelled.

1991 data:

– REFWEEK

This variable contains system-missings in some countries. The origin of these missings is unclear.

1989 data:

– REFWEEK

This variable contains system-missings in some countries. The origin of these missings is unclear.

1988 data:

– REFWEEK

This variable contains system-missings in some countries. The origin of these missings is unclear.

1987 data:

– REFWEEK

This variable contains system-missings in some countries. The origin of these missings is unclear.

1986 data:

– REFWEEK

This variable contains system-missings in some countries. The origin of these missings is unclear.

1985 data:

– REFWEEK

This variable contains system-missings in some countries. The origin of these missings is unclear.

1984 data:

– REFWEEK

This variable contains system-missings in some countries. The origin of these missings is unclear.

1983 data:

– REFWEEK

This variable contains system-missings in some countries. The origin of these missings is unclear.

– REGION

In Italy, there is a number of cases with the invalid code 19. The meaning of this code is unclear. Thus it has not been recoded and remains system-missing.

VI. Classifications

– ISCED classification (EDUCLEVEL, HATLEVEL):

http://epp.eurostat.ec.europa.eu/portal/page/portal/employment_unemployment_lfs/documents/ISCED_EN.pdf

– other classifications used in the EU LFS:
