

## EU-Labour Force Survey September 2020 release

### Setup for Importing the Anonymised Quarterly Data Sets for 1996-2019

#### Content

- I. Overview
- II. Explanatory notes on the recoding of alphanumeric variables into numeric variables
- III. Explanatory notes on the recoding of missing values
- IV. Explanatory notes on specific recoding, renaming and label definitions
- V. Notes on irregularities not mentioned in the User Guide
- VI. Classifications

#### I. Overview

The following information will help you to import the EU-LFS 1996-2019 quarterly data. The data you received from Eurostat are formatted as comma separated values (csv). With the routines provided by GESIS's German Microdata Lab, these data can be converted into SPSS and Stata.

The routines to convert the data into SPSS or Stata consist of a year-specific setup and a universal label syntax:

Setup\_EULFS\_1996-2019\_q.sps

Labels\_EULFS\_1983-2019.sps

Setup\_EULFS\_1996-2019\_q.do

Labels\_EULFS\_1983-2019.do

The routines achieve the following objectives:

- Transformation of EU-LFS data from csv into sav (SPSS) and into dta (Stata)
- Recoding of alphanumeric variables into numeric variables
- Recoding of missing values
- Assigning a release variable (RELEASE)
- Definition of variable and value labels (by executing the label syntax)

For a first check of the converted data, you can compare the number of cases per country with the number of cases listed in Table 2.1–2.24. Consistent numbers indicate that the execution of the setup was successful.

Note 1: The variable HATLEVEL has been renamed into HAT97LEV since the December 2014 release of the data (compared to older releases).

Note 2: The variables HAT11LEV, HATVOC, and EDUCVOC have been added with the November 2015 release.

Note 3: The number of cases in quarter 3 and 4 for Sweden in 2018 has been reduced since the last release.

## II. Explanatory notes on the recoding of alphanumeric variables into numeric variables

### – HHNUM, QHHNUM, QUARTER

These variables have a large number of values or – in case of QUARTER – only four values. Thus they remain alphanumeric.

### – YEARESID

The alphanumerically coded 5-year groups (11–14, 15–19 etc.) are recoded into numeric codes in line with the standard aggregation of AGE. In Malta, the grouping differs slightly from the other countries (see User Guide 2020, p. 69), however this is documented in the appropriate value labels.

### – COUNTRYW

Numeric 2-digit codes are assigned for European countries. These codes display the alphabetical order of the country as given by the ISO codes (e.g. 06 for BG representing Bulgaria). The alphanumeric codes in the EU-LFS differ from the ISO codes with regard to the United Kingdom (UK instead of GB). In this case, the numeric code is assigned in accordance with the code used in the EU-LFS (i.e. 50 for UK).

Numeric 4-digit codes are assigned for countries outside Europe. The first two digits indicate the region, according to the country codification from 2012 (e.g. 05 for North Africa).<sup>1</sup> The last two digits display the alphabetical order of the country in the corresponding region as given by the ISO codes (e.g. 02 for EG representing Egypt, so that the whole code for Egypt is 0502).<sup>2</sup>

In Malta and Slovenia, the coding of COUNTRYW in the raw data differs from the other countries (see User Guide 2020, p. 69). Thus the recoding within the Setup is different as well.

### – REGION, REGIONW

The values of these variables have country-specific meanings (according to the NUTS classification).<sup>3</sup> That is why they are attached to the consequent country variables (COUNTRY, COUNTRYW), excluding region variables with the code "00", which stands for "no information

---

<sup>1</sup> <http://ec.europa.eu/eurostat/documents/1978984/6037342/Country-codification-from-2012-onwards.pdf>

<sup>2</sup> <https://www.iso.org/iso-3166-country-codes.html>

<sup>3</sup> [http://ec.europa.eu/eurostat/statistics-explained/index.php/EU\\_labour\\_force\\_survey\\_-\\_methodology#Regions](http://ec.europa.eu/eurostat/statistics-explained/index.php/EU_labour_force_survey_-_methodology#Regions)

delivered" (see User Guide 2020). The new codes consist of 4 digits. Digits 1 and 2 are similar to the codification of COUNTRY/W. Digits 3 and 4 are similar to the original codification of REGION/W.

### III. Explanatory notes on the recoding of missing values

Coding standard for missing values:

in SPSS and Stata	in Stata (optional)	Labels
-1	.a	"No answer"
-2	.b	"Not applicable"
-3	.c	"Not available"
-4	.d	"Not specified"
-5	.e	"No information delivered"
-9	.j	"Otherwise" in exceptional cases (only LEAVCLAS)

In SPSS these missing values are declared as user missing values.

The Code -3/.c for "Not available" is assigned, if a variable has no valid cases in a country. Some of these variables have only system missings (i.e. blanks) in the raw data of the respective country, others have only cases with "No answer" and/or "Not applicable".

#### Please note:

Optionally, missing values in Stata can be encoded as the extended missing values .a, .b, .c, etc. by reinserting the block "Declare User-Missing Values" at the end of the respective setup.

Specifics and exceptions:

#### – NATIONAL, COUNTRYB

The code -1/.a includes not only cases without a valid answer, but also suppressed cases, cases with the original code "Other and Stateless", and in some countries certain other cases (see User Guide 2020, p. 75).

### IV. Explanatory notes on specific recoding, renaming and label definitions

#### – IS883D, IS88PR3D

The variables IS883D and IS88PR3D include unknown values (11, 249, 299, 349, etc.) in the years 1996–2010 which are not mentioned in the User Guide and which are not recoded.

#### – YEARPR, LEAVTIME

In the year 1996 in Slovenia, there are a few cases with invalid codes. The variable YEARPR includes the unknown values 193, 197, and 198. The variable LEAVTIME includes the unknown values 21576, 21588, and 21636. The meaning of these codes is unclear. Thus, they remain unlabelled.

– REM

In Spain and Portugal, in the fourth quarter in 1996 and 1997, there are some cases with the invalid code 13. The meaning of this code is unclear. Thus, it remains unlabelled.

– HAT97LEV

In Ireland, in the third quarter in 1999, there are only invalid one-digit codes. Therefore the invalid codes (1, 2, 3, 5, 6, 9) remain unlabelled.

– ILOSTAT

In Cyprus, in 1999 there are no cases with value 2 for "Unemployed" and no cases with value 3 for "Inactive". Instead, there are many cases with system-missing. The origin of these missings is unclear.

## V. Notes on irregularities not mentioned in the User Guide

Note that the weighting factor COEFF can be zero or missing in some cases. This is correct and guarantees appropriate weighting.

Moreover, across years and countries, some variables contain system missings and irregular values (deviating from the User Guide) of unclear origin. These cases are not changed with the setup files. Tables 1.1 - 1.2 show the number of unexplainable system missing values.

## VI. Classifications

For information on the classifications used in the EU-LFS, see

[http://ec.europa.eu/eurostat/statistics-explained/index.php/EU\\_labour\\_force\\_survey\\_-\\_methodology#Classifications\\_in\\_the\\_EU-LFS](http://ec.europa.eu/eurostat/statistics-explained/index.php/EU_labour_force_survey_-_methodology#Classifications_in_the_EU-LFS)
